ORGANIC DERIVATIVES OF SILICA GEL WITH

Trans. of Helvetica Chimica Acta (Switzerland) 1959,
v. 42, p. 1166-1170.

Organic derivatives of silica were prepared by treat-
ing silica with triphenyl- and trimethylchlorosilane
or with hexamethyldisilazane. The trimethylsiloxy
derivatives are extremely hydrophobic. Butyl deriva-
tives were prepared by treatment of silica chloride
with butyl magnesium bromide or with butyl lithium,
and phenyl derivatives were prepared with benzene in
the presence of aluminum chloride or with phenyl
lithium. Phenyl derivatives of silica prepared with
phenyl lithium were degraded by sodium hydroxide.
The toluene-soluble degradation products were frac-
tionated on an aluminum oxide column. One degrada-
tion product was identified as $(C_6H_5SiO)_3$. The
